

When your pulse begins to
race out of time

DOH NO: 03/43851206

Life has so much more to offer. And only a healthy heart can take you through the most exciting moments in life. Just a little care can rid you of all the cardiac worries...only if you take timely preventive measures. At Zulekha Hospital, we have world class facilities that can detect heart ailments even if you are seemingly fit. Our highly qualified cardiac professionals can run you through the basic tests to prevent any future problems. So that you can remain fit and hearty to celebrate those timeless moments.

Zulekha Hospital
Your Health Matters LLC

• Non-invasive investigation facilities including Resting 12-Head ECG, Computerized Stress ECG (Tread Mill Test) which can detect overt or occult Ischemia of the heart (diminution of blood supply to the heart because of block in circulation). • Two-dimensional Echocardiography plus a Colour Doppler-imaging facility to evaluate structural problems of the heart and their effect on heart function. • 24-Hour Ambulatory blood pressure recording to identify widely fluctuating blood pressure. • 24-Hour Ambulatory ECG recording facility (Holter Monitoring) to detect any Arrhythmia or Ischemia, which is not obvious in the Resting ECG.

When your strength
nurtures your family

Giving you 'heart care' specialty with Cath Lab facility

Your family always looks up to you in times of difficulties. But lack of proper attention to your heart's well being can only make things more difficult for them. Just a little care can rid you of cardiac worries...only if you begin at this very instant. For years, Zulekha Hospital has offered you quality facilities to diagnose, predict and correct most heart ailments. Now, to bring you advanced cardiac solutions, we have installed a Cath Lab which aids in superspecialty cardiac analysis and treatments like angiography and angioplasty. With this technology, Zulekha Hospital presents you a chance to truly take responsibility of your cardiac well being to heart.

- Non-invasive investigation facilities including Resting 12-Lead ECG, Computerized Stress ECG (Tread Mill Test) which can detect overt or occult Ischemia of the heart (diminution of blood supply to the heart because of block in circulation).
- Two-dimensional Echocardiography plus a Colour Doppler-imaging facility to evaluate structural problems of the heart and their effect on heart function.
- 24-Hour Ambulatory blood pressure recording to identify widely fluctuating blood pressure.
- 24-Hour Ambulatory ECG recording facility (Holter Monitoring) to detect any Arrhythmia or Ischemia, which is not obvious in the Resting ECG.
